Position

Z-index

Position

Position

The position property specifies the type of positioning method used for an element. There are five different position values: static, relative, fixed, absolute, sticky. Elements are then positioned using the top, bottom, left, and right properties

```
1 .card{
2     position: static | relative | absolute |
3             fixed | sticky;
4     top;
5     bottom;
6     left;
7     right;
8 }
```

CSS Position Property

Fixed

Sticky

Z-index

Z-index

When elements are positioned, they can overlap other elements. The **zindex** property specifies the stack order of an element. An element can have a **positive** or **negative** stack order.

Note: z-index only works on positioned elements (position: absolute, position: relative, position: fixed, or position: sticky)
